

ALS LABORATORY GROUP

**OOWA is pleased to announce
ALS Laboratory Group is the official Lab Services partner
for OOWA Members**

**WATER - WASTEWATER - SOILS/SEDIMENT - FISH TISSUE TESTING
AIR QUALITY - HAZARDOUS WASTE**

ALS Laboratory Group's (ALS') Waterloo and Thunder Bay locations offer a complete range of drinking water testing services including, but not limited to, microbiological testing for *E.coli*, Fecal and Total Coliforms, and heterotrophic plate counts; as well as chemical and physical testing of water for a variety of inorganic and organic parameters. Microbiological testing can also be performed at our ALS London laboratory and samples can be dropped off at our GTA service centres.

ALS has competent, experienced staff who can assist you with determining the sampling frequency necessary for ensuring your drinking water is safe on an ongoing basis, and who can provide guidance on proper sampling and handling procedures so that your samples maintain their integrity and your results are accurate.

Sampling - Samples should be collected in appropriately sized bottles that can be obtained by contacting your nearest ALS laboratory location. Samples must be shipped cool, not frozen, and delivered within 24 hours of sampling.

Accredited & Licensed - The ALS Ontario laboratories operate under ALS' global Quality Management System, and are accredited and licensed to perform the analytical procedures under *O.Reg 252/05* and under *O.Reg 170/03* for larger/designated drinking water facilities, and *O.Reg 243/07*, the lead regulation for any school or daycare centre serving children under the age of 18.

Reporting & Web Access - ALS, we are pleased to offer electronic reporting, delivered to your email inbox, or sent to you by fax. Upon request, hard copy reports can be made available. Our staff keep up to date with government drinking water standards, and are available by phone, email, or in person to discuss the results of your report with you.
